COURSE COORDINATOR : M. Rami Reddy
PRE-REQUISITES : None

COURSE EDUCATIONAL OBJECTIVES (CEO): The objective of this course is to provide students with the foundations and applications of probabilistic and statistical methods mainly used in varied applications in engineering and science.

COURSE OUTCOMES (COs): At the end of the course, the student will be able to

| CO1 | Understand various probabilistic situations using the laws of probability and <br> Random variables. | Understand <br> $-\mathbf{L 2}$ |
| :--- | :--- | :---: |
| $\mathbf{C O 2}$ | Apply probability distributions like Binomial, Poisson, Normal and <br> Exponential distributions in solving engineering problems. | Apply - L3 |
| $\mathbf{C O 3}$ | Calculate the standard error of sampling distribution and confidence intervals <br> for parameters like mean and proportion based on sample data. | Apply - L3 |
| $\mathbf{C O 4}$ | Analyze the data scientifically with the appropriate statistical methodologies <br> to apply the suitable test of hypothesis. | Analyze - L4 |
| $\mathbf{C O 5}$ | Construct the regression lines to predict the dependent variables and calculate <br> the Correlation Coefficient for a bivariate statistical data. | Apply - L3 |

COURSE ARTICULATION MATRIX (Correlation between COs, POs \& PSOs):

| COs | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 | PSO1 | PSO2 | PSO3 |

## PART-D

Program Educational Objectives (PEOs):

| PEO1 | To possess knowledge in both fundamental and application aspects of mathematical, scientific, engineering <br> principles to analyze complex engineering problems for meeting the national and international <br> requirements and demonstrating the need for sustainable development. |
| :--- | :--- |
| PEO2 | To adapt to the modern engineering tools for planning, analysis, design, implementation of analytical data <br> and assess their relevant significance in societal and legal issues necessary in their professional career. |
| PEO3 | To exhibit professionalism, ethical attitude, communication, managerial skills, team work and social <br> responsibility in their profession and adapt to current trends by engaging in continuous learning. |

## Program Outcomes (POs):

| PO1 - Engineering Knowledge | Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. |
| :---: | :---: |
| PO2 - Problem Analysis | Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences. |
| PO3 - Design / <br> Development of Solutions | Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations. |
| PO4 - Conduct Investigations of Complex Problems | Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions. |
| PO5 - Modern Tool Usage | Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations. |
|  | Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice. |
| PO7 - Environment and Sustainability | Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. |
| PO8 - Ethics | Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice. |
| PO9 - Individual and Team Work | Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings. |
| PO10 - <br> Communication | Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. |
| PO11 - Project <br> Management and Finance | Demonstrate knowledge and understanding of the ring and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments. |

PO12 - Life-long Learning

Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development. the engineering practice.
Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions. Demonstrate knowledge and understanding of the ring and management principles and apply multidisciplinary environments.
Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## Program Specific Outcomes (PSOs):

## PSO1

Possesses necessary skill set to analyze and design various systems using analytical and software tools related to civil engineering.
Possesses ability to plan, examine and analyse the various laboratory tests required for the professional demands.

PREREQUISITE: Applied Mechanics, Mechanics of Fluids
COURSE EDUCATIONAL OBJECTIVES (CEOs): The course allows the student to get insight into open channel hydraulics, and the various theories dealing with the flow phenomenon of fluid in an open channel. The student is exposed to the basics, components, and working of the hydro machinery, applicationsof different types of turbines and pumps.

COURSE OUTCOMES (COs): At the end of the course, student will be able to

| CO1 | Understand the various types of flows, specific energy curves, hydraulic jumps and working of <br> hydraulic machines in fluid flows. (Understand-L2) |
| :---: | :--- |
| CO2 | Apply the basic principles to design the open channels and determine the energy losses due to <br> formation of hydraulic jump. (Apply-L3) |
| CO3 | Apply the impulse-momentum equation to determine the force exerted by a jet on different <br> configurations of vanes. (Apply-L3) |

## PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):

| PEO 1 | To possess knowledge in both fundamental and application aspects of mathematical, scientific, engineering <br> principles to analyze complex engineering problems for meeting the national and international <br> requirements and demonstrating the need for sustainable development. |
| :---: | :--- |
| PEO 2 | To adapt to the modern engineering tools for planning, analysis, design, implementation of analytical data <br> and assess their relevant significance in societal and legal issues necessary in their professional career. |
| PEO 3 | To exhibit professionalism, ethical attitude, communication, managerial skills, team work and social <br> responsibility in their profession and adapt to current trends by engaging in continuous learning. |

PROGRAMME OUTCOMES (POs):

| PO 1 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an <br> engineering specialization to the solution of complex engineering problem |
| :---: | :--- |
| PO 2 | Problem analysis: Identify, formulate, review research literature, and analyze complex engineering <br> problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and <br> engineering sciences. |
| PO 3 | Design/development of solutions: Design solutions for complex engineering problems and design system <br> components or processes that meet the specified needs with appropriate consideration for the public health <br> and safety, and the cultural, societal, and environmental considerations. |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and research methods <br> including design of experiments, analysis and interpretation of data, and synthesis of the information to <br> provide valid conclusions. |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering <br> and IT tools including prediction and modelling to complex engineering activities with an understanding of <br> the limitations. |
| PO 6 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, <br> health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional <br> engineering practice. |
| PO 7 | Environment and sustainability: Understand the impact of the professional engineering solutions in <br> societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable <br> development. |
| PO 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the <br> engineering practice. |
| PO 9 | Individual and team work: Function effectively as an individual, and as a member or leader in diverse <br> teams, and in multidisciplinary settings. |
| PO 10 | Communication: Communicate effectively on complex engineering activities with the engineering <br> community and wwith society at large, such as, being able to comprehend and write effective reports and <br> design documentation, make effective presentations, and give and receive clear instructions. |
| PO 11 | Project management and finance: Demonstrate knowledge and understanding of the engineering and <br> management principles and apply these to one's own work, as a member and leader in a team, to manage <br> projects and in multidisciplinary environments. |
| PO 12 | Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent |

## PREREQUISITE: NIL

COURSE EDUCATIONAL OBJECTIVES (CEOs): The course aims to teach the different properties and classifications of soil. The course coverage includes the various procedures for determining index and engineering properties of soils.

COURSE OUTCOMES (COs): At the end of the course, student will be able to

| C01 | Understand the engineering and index properties of soil. (Understand-L2) |
| :--- | :--- |
| C02 | Classify the soils based on ISC system and grain size distribution. (Understand-L2) |
| C03 | Evaluate the permeability, shear strength and consolidation properties of soil. (Apply-L3) |
| C04 | Illustrate the stress distribution of soil subjected to different loading conditions. (Apply-L3) |

## PREREQUISITE: NIL

COURSE EDUCATIONAL OBJECTIVES (CEOs): To become more aware of themselves, and their surroundings (family, society, nature); they would become more responsible in life, and in handling problems with sustainable solutions, while keeping human relationships and human nature in mind.

COURSE OUTCOMES (COs): At the end of the course, student will be able to

| CO1 | Apply the value inputs in life and profession (Apply - L3) |
| :--- | :--- |
| $\mathbf{C O 2}$ | Distinguish between values and skills, happiness and accumulation of physical facilities, <br> the self, and the Body (Understand $-\mathbf{L 2}$ ) |
| $\mathbf{C O 3}$ | Understand the role of a human being in ensuring harmony in society <br> (Understand $-\mathbf{L 2}$ ) |
| $\mathbf{C O 4}$ | Understand the role of a human being in ensuring harmony in the nature and existence. <br> (Understand $-\mathbf{L 2}$ ) |
| $\mathbf{C O 5}$ | Distinguish between ethical and unethical practices (Apply - L3) |

COURSE ARTICULATION MATRIX (Correlation between Cos, Pos \& PSOs):

## TEXTBOOKS:

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010

## REFERENCE:

1. Jeevan Vidya: EkParichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999.
2. Human Values, A.N. Tripathi, New Age Intl. Publishers, New Delhi, 2004.
3. The Story of My Experiments with Truth - by Mohandas Karamchand Gandhi

## PART-D

## PROGRAMME OUTCOMES (POs):

| PO 1 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and <br> an engineering specialization to the solution of complex engineering problems. |
| :--- | :--- |
| PO 2 | Problem analysis: Identify, formulate, review research literature, and analyze complex engineering <br> problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and <br> engineering sciences. |
| PO 3 | Design/development of solutions: Design solutions for complex engineering problems and design <br> system components or processes that meet the specified needs with appropriate consideration for the <br> public health and safety, and the cultural, societal, and environmental considerations. |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and research methods <br> including design of experiments, analysis and interpretation of data, and synthesis of the information to <br> provide valid conclusions. |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering <br> and IT tools including prediction and modeling to complex engineering activities with an understanding <br> of the limitations |
| PO 7 | The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, <br> health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional <br> engineering practice |
| Environment and sustainability: Understand the impact of the professional engineering solutions in <br> societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable <br> development. |  |
| PO 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the <br> engineering practice. |
| PO 9 | Individual and team work: Function effectively as an individual, and as a member or leader in diverse <br> teams, and in multidisciplinary settings. |
| PO 10 | Communication: Communicate effectively on complex engineering activities with the engineering <br>  <br> Pommunity and with society at large, such as, being able to <br> and design documentation, make effective presentations, and give and receive clear instructions. repre |
| PO 11 | Project management and finance: Demonstrate knowledge and understanding of the engineering and <br> management principles and apply these to one's own work, as a member and leader in a team, to manage <br> projects and in multidisciplinary environments. <br> independent and life-long learning in the broadest context of technological change. ability to engage in |

## PROGRAMME SPECIFIC OUTCOMES (PSOs):

| PSO 1 | Possesses necessary skill set to analyze and design various systems using analytical and software tools <br> related to civil engineering |
| :--- | :--- |
| PSO 2 | Possesses ability to plan, examine and analyze the various laboratory test required for the professional <br> demands |
| PSO 3 | Possesses basic technical skills to pursue higher studies and professional practice in civil engineering <br> domain |

PREREQUISITE : Mechanics of Fluids, Hydraulics and Hydraulic Machinery Systems
COURSE EDUCATIONAL OBJECTIVES (CEOs): The student is given hands on training in working on fluid flow hydraulic machinery equipment and performs experiments to verify the principles of fluid mechanics and hydraulics based on laws of conservation of mass, energy, and momentum.

COURSE OUTCOMES (COs): At the end of the course, student will be able to

| CO1 | Develop knowledge on the fundamental principles of fluid flow. (Apply-L3) |
| :--- | :--- |
| CO2 | Apply the laws of conservation of mass, energy, and momentum to solve practical <br> problems in fluid mechanics. (Apply-L3) |
| CO3 | Practically visualize the functioning and performance of hydraulic turbines and pumps. <br> (Understand-L2) |

## HYDRAULICS AND HYDRAULIC MACHINERY LAB (20CE57)

## COURSE: IV SEMESTER

## PART-B

## LIST OF EXPERIMENTS

## I CYCLE

1. Determination of coefficient of discharge of Mouth-piece apparatus
2. Determination of coefficient of discharge of given Notches
3. Calibration of given Venturimeter.
4. Experiment on Orifice meter set-up
5. Verification of Bernoulli's theorem

## II CYCLE

1. Experiment on Friction in pipes.
2. Impact of jet on vanes.
3. Calibration of Turbine Flow Meter.
4. Performance characteristics of Pelton Wheel Turbine.
5. Operating characteristics of Centrifugal Pump.

## PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):

| PEO 1 | To possess knowledge in both fundamental and application aspects of mathematical, <br> scientific, engineering principles to analyze complex engineering problems for meeting the <br> national and international requirements and demonstrating the need for sustainable <br> development. |
| :--- | :--- |
| PEO 2 | To adapt to the modern engineering tools for planning, analysis, design, implementation <br> of analytical data and assess their relevant significance in societal and legal issues <br> necessary in their professional career. |
| PEO 3 | To exhibit professionalism, ethical attitude, communication, managerial skills, team work <br> and social responsibility in their profession and adapt to current trends by engaging in <br> continuous learning. |

## PROGRAMME OUTCOMES (POs):

| PO 1 | Engineering knowledge: Apply the knowledge of mathematics, science, engineering <br> fundamentals, and an engineering specialization to the solution of complex engineering <br> problem |
| :---: | :--- |
| PO 2 | Problem analysis: Identify, formulate, review research literature, and analyze complex <br> engineering problems reaching substantiated conclusions using first principles of <br> mathematics, natural sciences, and engineering sciences. |
| PO 3 | Design/development of solutions: Design solutions for complex engineering problems <br> and design system components or processes that meet the specified needs with <br> appropriate consideration for the public health and safety, and the cultural, societal, and <br> environmental considerations. |
| PO 4 | Conduct investigations of complex problems: Use research-based knowledge and <br> research methods including design of experiments, analysis and interpretation of data, <br> and synthesis of the information to provide valid conclusions. |
| PO 5 | Modern tool usage: Create, select, and apply appropriate techniques, resources, and <br> modern engineering and IT tools including prediction and modelling to complex <br> engineering activities with an understanding of the limitations. |
| PO 6 | The engineer and society: Apply reasoning informed by the contextual knowledge to <br> assess societal, health, safety, legal and cultural issues and the consequent <br> responsibilities relevant to the professional engineering practice. |

| PO 7 | Environment and sustainability: Understand the impact of the professional <br> engineering solutions in societal and environmental contexts, and demonstrate the <br> knowledge of, and need for sustainable development. |
| :---: | :--- |
| PO 8 | Ethics: Apply ethical principles and commit to professional ethics and responsibilities <br> and norms of the engineering practice. |
| PO 9 | Individual and team work: Function effectively as an individual, and as a member or <br> leader in diverse teams, and in multidisciplinary settings. |
| PO 10 | Communication: Communicate effectively on complex engineering activities with the <br> engineering community and with society at large, such as, being able to comprehend and <br> write effective reports and design documentation, make effective presentations, and <br> give and receive clear instructions. |
| PO 11 | Project management and finance: Demonstrate knowledge and understanding of the <br> engineering and management principles and apply these to one's own work, as a <br> member and leader in a team, to manage projects and in multidisciplinary environments. |
| PO 12 | Life-long learning: Recognize the need for, and have the preparation and ability to <br> engage in independent and life-long learning in the broadest context of technological <br> change. |

## PROGRAMME SPECIFIC OUTCOMES (PSOs):

| PSO 1 | Possesses necessary skill set to analyze and design various systems using analytical and <br> software tools related to civil engineering. |
| :--- | :--- |
| PSO 2 | Possesses ability to plan, examine and analyse the various laboratory tests required for <br> the professional demands. |
| PSO 3 | Possesses basic technical skills to pursue higher studies and professional practice in <br> civil engineering domain. |

## PREREQUISITE

COURSE EDUCATIONAL OBJECTIVES (CEOs): The course aims to train the students in performing laboratory experiments to find the basic properties soil. The course coverage includes the various field applications of soil.

COURSE OUTCOMES (COs): At the end of the course, student will be able to

| C01 | Identify the tools, equipment required, and experimental procedure used in soil <br> investigation (Understand-L2) |
| :---: | :--- |
| C02 | Determine the index and engineering properties of soil (Apply-L3) |
| C03 | Perform field and laboratory tests for soil investigations to compute desired parameters <br> (Apply-L3) |
| $\mathbf{C 0 4}$ | Apply field conditions for computing and analyzing the experimental data (Understand-L2) |

## COURSE DELIVERY PLAN (LESSON PLAN):

## CYCLE-I

1. Determination of water content by over dry method(EXP-I)
2. Particle size distribution curve by Mechanical Sieve Analysis(EXP-II)
3. Determination of specific gravity by Pycnometer method. (EXP-III)
4. Determination of Atterberg limits (EXP-IV)
5. Determination of free swell index. (EXP-V)
6. Determination of field unit weight of soil by Core cutter method. EXP-VI
7. Determination of field unit weight of soil by Sand replacement method. EXP- VII

## CYCLE-II

8. Determination of coefficient of permeability of Coarse-grained soil by Constant head permeameter. (EXP-VIII)
9. Determination of MDD and OMC of given soil by Standard proctor test. (EXP-IX)
10. Determination of MDD and OMC of given soil by Modified proctor test. (EXP-X)
11. Determination of shear strength parameters of given soil by direct shear test. (EXP-XI)
12. Determination of undrained shear strength of soil by unconfined compression test. (EXPXII)

## COURSE EDUCATIONAL OBJECTIVES (CEOs):

In this course, student will learn about basic operations and functions of MATLAB and apply them for solving civil engineering problems.
COURSE OUTCOMES (COs): At the end of the course, student will be able to

| C01 | Understand the basics of MATLAB programming through simple exercises. (Understanding -L2) |
| :--- | :--- |
| C02 | Apply the MATLAB fundamentals to solve Civil engineering problems. (Apply-L3). |

## PART-D

## Program Educational Objectives (PEOs):

PEO1: To possess knowledge in both fundamental and application aspects of mathematical, scientific, engineering principles to analyze complex engineering problems for meeting the national and international requirements and demonstrating the need for sustainable development.

PEO2: To adapt to the modern engineering tools for planning, analysis, design, implementation of analytical data and assess their relevant significance in societal and legal issues necessary in their professional career.

PEO3: To exhibit professionalism, ethical attitude, communication, managerial skills, team work and social responsibility in their profession and adapt to current trends by engaging in continuous learning.

## Program Outcomes (POs):

PO1 - Engineering Knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2 - Problem Analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3 - Design / Development of Solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4 - Conduct Investigations of Complex Problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5 - Modern Tool Usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6 - The Engineer and Society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7 - Environment and Sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.

PO8 - Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO9 - Individual and Team Work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO10 - Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11 - Project Management and Finance: Demonstrate knowledge and understanding of the ring and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12 - Life-long Learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

## PROGRAMME SPECIFIC OUTCOMES (PSOs):

PSO1: Possesses necessary skill set to analyze and design various systems using analytical and software tools related to civil engineering.
PSO2: Possesses ability to plan, examine and analyze the various laboratory tests required for the professional demands.
PSO3: Possesses basic technical skills to pursue higher studies and professional practice in civil engineering domain.
