2. Enumerate the number of ways of placing 20 indistinguishable balls into 5 boxes where each box is nonempty.
3. Find a recurrence relation for the number of ways to arrange flags on flag pole  $n$  feet tall using 4 types of flags. Red flags 2 feet high, (or) White, blue and yellow flags each 1 foot high.
4. Find a recurrence relation for the number of ways to make a pile of  $n$  chips using garnet, gold, red, white and blue chips such that no two gold chips are together.
5. Compute the number of 10-digit numbers which contain only the digits 1,2 and 3 with the digit 2 appearing in each number exactly twice.
6. Describe Fibonacci relation with suitable examples.
7. Explain the methods of solving recurrence relations with suitable examples.
8. In how many ways can we distribute 10 red balls, 10 white balls, and 10 blue balls into 6 different boxes (any box may be left empty)?
9. How many bridge deals are there in which North and South get all the spades?
10. What is a group and sub group, and explain about its properties?
11. Explain the groups Isomorphism and homomorphism?

#### UNIT-V

1. Solve the recurrence relation

$$S(k) - 0.25 S(k-1) = 0, S(0) = 6.$$

2. Solve the recurrence relation  $a_n - 9a_{n-1} + 26a_{n-2} - 24a_{n-3} = 0$  for  $n \geq 3$ .

3. Solve the Recurrence Relation  $a_n - 7a_{n-1} + 10a_{n-2} = 0$  for  $n \geq 2$   $a_0 = 10, a_1 = 41$

4. Solve the Recurrence Relation  $a_{n+2} + 4a_{n+1} - 5a_n = n^2 + n + 1$  for  $n \geq 2$   $a_0 = 10, a_1 = 41$ .

1. Write a C++ program to find the sum of individual digits of a positive integer.
  2. Write a C++ program to generate the first 'n' terms of the sequence. A Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are formed by adding the preceding two terms in the sequence.
  3. Write a C++ program to generate all the **prime numbers** between 1 and n. Where 'n' is a value supplied by the user.
  4. Write a C++ programs that use both **recursive** and **non-recursive** functions
    - a) To find the factorial of a given integer.
    - b) To find the GCD of two given integers.
    - c) To find the n<sup>th</sup> Fibonacci number.
  5. Write a C++ program to perform addition, subtraction and multiplication operations on two complex numbers using **classes and objects**.
  6. Write a C++ program to find out the total and average marks of 10 students using **Classes and objects?**
  7. Write a C++ program to implement **static data members** and **static member functions**
  8. Write a C++ program to implement the **matrix ADT using** a class. The operations Supported by this ADT are:
    - a) Reading a matrix.
    - b) Displaying a matrix
    - c) Addition of matrices.

1. Write a C++ program to find the sum of individual digits of a positive integer.
  2. Write a C++ program to generate the first 'n' terms of the sequence. A Fibonacci sequence is defined as follows: the first and second terms in the sequence are 0 and 1. Subsequent terms are formed by adding the preceding two terms in the sequence.
  3. Write a C++ program to generate all the **prime numbers** between 1 and n. Where 'n' is a value supplied by the user.
  4. Write a C++ programs that use both **recursive** and **non-recursive** functions
    - a) To find the factorial of a given integer.
    - b) To find the GCD of two given integers.
    - c) To find the n<sup>th</sup> Fibonacci number.
  5. Write a C++ program to perform addition, subtraction and multiplication operations on two complex numbers using **classes and objects**.
  6. Write a C++ program to find out the total and average marks of 10 students using **Classes and objects?**
  7. Write a C++ program to implement **static data members** and **static member functions**
  8. Write a C++ program to implement the **matrix ADT using** a class. The operations Supported by this ADT are:
 

a) Reading a matrix.	c) Addition of matrices.
