	LESSON PLAN	Date: 27/01/2016
	Sub. Name : COMPUTER GRAPHICS Branch: CSE, Semester & Sections: IV & B	To 15/06/2016

S167 – COMPUTER GRAPHICS

Lecture	: 5 Periods/week	Internal Marks	: 25
Tutorial	: 1	External Marks	: 75
Credits	: 4	External Examination	: 3 Hrs

UNIT - I

Introduction: Usage of Graphics and their applications, Presentation Graphics-Computer Aided Design-Computer Art- Entertainment- Education and Training-Visualization- Image Processing- Graphical User Interfaces. **Over view of Graphics systems:** Video Display Devices- Raster Scan systems-random scan systems-Graphics monitors and workstations, Input devices.

UNIT - II

Output primitives: Points and Lines-Line Drawing Algorithms- Loading the Frame buffer- Line function- Circle- Generating Algorithms- Ellipse Generating Algorithms-Other Curves- Parallel Curve Algorithm Functions-Pixel Addressing- Filled Area Primitives-Filled Area Functions.

UNIT - III

Two Dimensional Geometric Transformations: Basic Transformations- Matrix Representations - Homogeneous Coordinates - Composite Transformations - Other Transformations-Transformations between Coordinate Systems - Affine Transformations Transformation Functions- Raster methods for Transformation.

UNIT - IV

Two Dimensional Viewing: The viewing Pipeline-Viewing Coordinate Reference Frame Window-to-Viewport Coordinate Transformation-Two Dimensional Viewing Functions Clipping Operations-Point Clipping-Line Clipping-Polygon Clipping.

UNIT - V Three Dimensional Concepts and Object representations: 3D display methods 3D Graphics- Polygon Surfaces- Curved Lines and Surfaces- Quadratic Surfaces, **Three Dimensional Geometric and**

Modeling Transformations: Translation-Rotation-scaling-Other Transformations-Composite Transformations-3D Transformation Functions-Modeling and Coordinate Transformations

TEXT BOOK

1. Donald Hearn & M. Pauline Baker, "Computer Graphics C Version", Pearson Education, New Delhi, 2004 (Chapters 1 to 12 except 10-9 to 10-22 of the Text book)

REFERENCES

1. David F. Rogers; "Procedural Elements for Computer Graphics" TMH Publications.
2. J. D. Foley, S. K Feiner, A Van Dam F. H John; "Computer Graphics: Principles & Practice in C"; Pearson.
3. Francis S Hill Jr; "Computer Graphics using Open GL"; Pearson Education, 2004.

Course Educational Objectives (CEO's):

- Students will have an appreciation of the history and evolution of computer graphics, both hardware and software.
- Students will have an understanding of 2D graphics and algorithms which includes line drawing, polygon filling, clipping, and transformations.
- Students will understand the concepts & techniques used in 3D computer graphics, including viewing transformations, hierarchical modeling, color, lighting and texture mapping.

Course Outcomes (CO's)

After completion of the course, students will be able to:

CO1 : Understand the various applications of graphics and interactive input and output devices.

CO2 : Design and Implement the algorithms to draw the line, circle and ellipse.

CO3 : Apply different geometrical transformations such as translation, scaling, rotation, reflection and shear in 2D

CO4 : Understand 2D Coordinate transformation, viewing functions and various clipping algorithms

CO5 : Understand the various display methods, geometrical & coordinate transformations in 3D.

Prerequisite: Knowledge of coordinate system in mathematics.

S167 – COMPUTER GRAPHICS

Lecture	: 5 Periods/week	Internal Marks	: 25
Tutorial	: 1	External Marks	: 75
Credits	: 4	External Examination	: 3 Hrs

UNIT - I

Introduction: Usage of Graphics and their applications, Presentation Graphics-Computer Aided Design-Computer Art- Entertainment- Education and Training-Visualization- Image Processing- Graphical User Interfaces. **Over view of Graphics systems:** Video Display Devices- Raster Scan systems-random scan systems-Graphics monitors and workstations, Input devices.

UNIT - II

Output primitives: Points and Lines-Line Drawing Algorithms- Loading the Frame buffer- Line function- Circle- Generating Algorithms- Ellipse Generating Algorithms-Other Curves- Parallel Curve Algorithms- Curve Functions-Pixel Addressing- Filled Area Primitives-Filled Area Functions.

UNIT - III

Two Dimensional Geometric Transformations: Basic Transformations- Matrix Representations - Homogeneous Coordinates - Composite Transformations - Other Transformations-Transformations between Coordinate Systems - Affine Transformations Transformation Functions-Raster methods for Transformation.

UNIT - IV

Two Dimensional Viewing: The viewing Pipeline-Viewing Coordinate Reference Frame Window-to-Viewport Coordinate Transformation-Two Dimensional Viewing Functions Clipping Operations-Point Clipping-Line Clipping-Polygon Clipping.

UNIT - V

Three Dimensional Concepts and Object representations: 3D display methods 3DGraphics-Polygon Surfaces- Curved Lines and Surfaces- Quadratic Surfaces, **Three Dimensional Geometric and Modeling Transformations:** Translation-Rotation-scaling-Other Transformations-Composite Transformations-3D Transformation Functions-Modeling and Coordinate Transformations.

TEXT BOOK

2. Donald Hearn & M. Pauline Baker, "Computer Graphics C Version", Pearson Education, New Delhi, 2004 (Chapters 1 to 12 except 10-9 to 10-22 of the Text book)

Educational Objectives (CEO's):

- Students will have an appreciation of the history and evolution of computer graphics, both hardware and software.
- Students will have an understanding of 2D graphics and algorithms which includes line drawing, polygon filling, clipping, and transformations.
- Students will understand the concepts & techniques used in 3D computer graphics, including viewing transformations, hierarchical modeling, color, lighting and texture mapping.

Course Outcomes (CO's)

After completion of the course, students will be able to:

CO1 : Understand the various applications of graphics and interactive input and output devices.

CO2 : Design and Implement the algorithms to draw the line, circle and ellipse.

CO3 : Apply different geometrical transformations such as translation, scaling, rotation, reflection and shear in 2D

CO4 : Understand 2D Coordinate transformation, viewing functions and various clipping algorithms

CO5 : Understand the various display methods, geometrical & coordinate transformations in 3D.

Prerequisite: Knowledge of coordinate system in mathematics

LESSON PLAN

Subject :	PROBABILITY & STATISTICS (P&S) - S 351			
Academic Year :	2015-16	Semester :	IV	Date: 27.01.2016 To 07.06.2016
Faculty name :	D.Vijay Kumar	Branch :	CSE-A	

SYLLABUS

UNIT - I

PROBABILITY AND RANDOM VARIABLES

Conditional probability – Multiplication theorem-Bayes's theorem. Random variables – Discrete and continuous Random Variables and their distribution functions, Mathematical Expectation of Univariate Random Variable.

UNIT - II

PROBABILITY DISTRIBUTIONS

Probability Distributions-Binomial, Poisson, Normal and Gamma distributions-related properties, simple applications. Moment Generating Function and properties. Moment Generating Function for standard distributions.

UNIT - III

SAMPLING DISTRIBUTION AND ESTIMATION

Population and samples. Sampling distribution of mean (with known and unknown variance), proportion, variances. - Sampling distribution of sums and differences. Point and interval estimators for mean, variance and proportions.

UNIT - IV

TESTING OF HYPOTHESIS

Null and Alternative Hypothesis, One tail and two tailed tests, Type I and Type II errors. Testing of hypothesis concerning means, proportions and their differences using Z-test. Tests of hypothesis using Student's t-test, F-test and χ^2 test. Applications of decision making using the above tests.

UNIT - V

CORRELATION AND CURVE FITTING

Simple Bivariate Correlation and Regression lines. Curve fitting: Fitting a straight line – Second degree curve-exponential curve by method of least squares and goodness of fit.

TEXT BOOKS

1. Miller & Freund's "Probability and Statistics for Engineers" Prentice Hall of India, New Delhi, 8th edition. 2011.
2. William W. Hines "Probability and Statistics in Engineering" John Wiley & Sons, 4th edition. 2002

REFERENCES

1. Jay L. Devore "Probability and Statistics for engineering and the sciences." Cengage Learning india, 8th edition, 2012.
2. S.C. Gupta & V.K. Kapoor "Fundamentals of Mathematical Statistics" Sultan Chand and sons, New Delhi. 11th edition 2002.
3. T.K.V. Iyengar "Probability and Statistics" S. Chand & Company, New Delhi, edition 2012.
4. B.V. Ramana "Higher Engineering Mathematics" TMH, New Delhi, 1st Edition, 2010.

Course Educational Objectives:

The main objectives of this course are

0. To revise elementary concepts and techniques encountered in probability.
1. To extend and formalize knowledge of the concepts of probability and probability distributions.
2. To introduce the techniques for carrying out sampling methods and estimation of parameters.
3. To motivate the use of sampling tests using tests of significance.
4. To study the concepts of correlation and linear, non linear regression lines.

Course Outcomes:

After the completion of the course, students should be able to

CO1: Apply knowledge of mathematics & probability techniques in engineering.

CO2: Design as well as to analyze and interpret the problems using Probability distributions.

CO3: Apply the methods of sampling and estimation of parameter values.

CO4: Identify, formulate and solve problems using tests of hypothesis.

CO5: To measure the association between the variables and prediction of variables.

LESSON PLAN

Subject :	PROBABILITY & STATISTICS (P&S) - S 351			
Academic Year :	2015-16	Semester :	IV	Date: 27.01.2016
Faculty name :	M.Rami Reddy	Branch :	CSE-B	To 07.06.2016

SYLLABUS

UNIT - I

PROBABILITY AND RANDOM VARIABLES

Conditional probability – Multiplication theorem-Bayes's theorem. Random variables – Discrete and continuous Random Variables and their distribution functions, Mathematical Expectation of Univariate Random Variable.

UNIT - II

PROBABILITY DISTRIBUTIONS

Probability Distributions-Binomial, Poisson, Normal and Gamma distributions-related properties, simple applications. Moment Generating Function and properties. Moment Generating Function for standard distributions.

UNIT - III

SAMPLING DISTRIBUTION AND ESTIMATION

Population and samples. Sampling distribution of mean (with known and unknown variance), proportion, variances. - Sampling distribution of sums and differences. Point and interval estimators for mean, variance and proportions.

UNIT - IV

TESTING OF HYPOTHESIS

Null and Alternative Hypothesis, One tail and two tailed tests, Type I and Type II errors. Testing of hypothesis concerning means, proportions and their differences using Z-test. Tests of hypothesis using Student's t-test, F-test and χ^2 test. Applications of decision making using the above tests.

UNIT - V

CORRELATION AND CURVE FITTING

Simple Bivariate Correlation and Regression lines. Curve fitting: Fitting a straight line –
Second degree curve-exponential curve by method of least squares and goodness of fit.

TEXT BOOKS

1. Miller & Freund's "Probability and Statistics for Engineers" Prentice Hall of India, New Delhi, 8th edition. 2011.
2. William W. Hines "Probability and Statistics in Engineering" John Wiley & Sons, 4th edition. 2002

REFERENCES

1. Jay L. Devore "Probability and Statistics for engineering and the sciences." Cengage Learning india, 8th edition, 2012.
2. S.C. Gupta & V.K. Kapoor "Fundamentals of Mathematical Statistics" Sultan Chand and sons, New Delhi. 11th edition 2002.
3. T.K.V. Iyengar "Probability and Statistics" S. Chand & Company, New Delhi, edition 2012.
4. B.V. Ramana "Higher Engineering Mathematics" TMH, New Delhi, 1st Edition, 2010.

Course Educational Objectives:

The main objectives of this course are

5. To revise elementary concepts and techniques encountered in probability.
6. To extend and formalize knowledge of the concepts of probability and probability distributions.
7. To introduce the techniques for carrying out sampling methods and estimation of parameters.
8. To motivate the use of sampling tests using tests of significance.
9. To study the concepts of correlation and linear, non linear regression lines.

Course Outcomes:

After the completion of the course, students should be able to

CO1: Apply knowledge of mathematics & probability techniques in engineering.

CO2: Design as well as to analyze and interpret the problems using Probability distributions.

CO3: Apply the methods of sampling and estimation of parameter values.

CO4: Identify, formulate and solve problems using tests of hypothesis.

CO5: To measure the association between the variables and prediction of variables.

	Sub. Name : DATABASE MANAGEMENT SYSTEMS LAB Branch: CSE Semester & Sections: IV & B	To 15/06/2016

S180 - DATABASE MANAGEMENT SYSTEMS LAB

Lecture	: 4 Periods/week	Internal Marks	: 25
Tutorial	: 1	External Marks	: 75
Credits	: 4	External Examination	: 3 Hrs

CYCLE-1

1) Create a table STUDENT with appropriate data types and perform the following queries.

Roll number, student name, date of birth, branch and year of study.

1. Insert 5 to 10 rows in a table?
2. List all the students of all branches
3. List student names whose name starts with 's'
4. List student names whose name contains 's' as third literal
5. List student names whose contains two 's' anywhere in the name
6. List students whose branch is NULL
7. List students of CSE & ECE who born after 1980
8. List all students in reverse order of their names
9. Delete students of any branch whose name starts with 's'
10. Update the branch of CSE students to ECE
11. Display student name padded with '*' after the name of all the students

2) Create the following tables based on the above Schema Diagram with appropriate data types and constraints and perform the following queries.

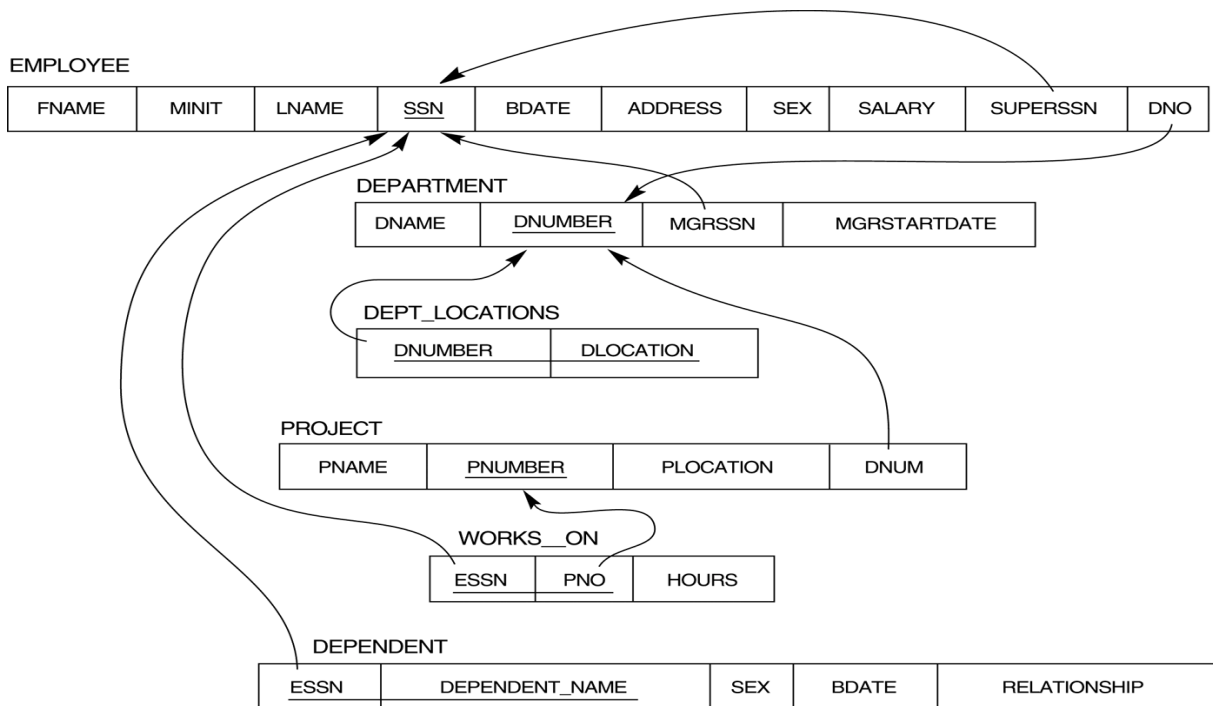

SAILORS (Sailid, Salname, Rating, Age)

RESERVES (Sailid, boatid, Day)

BOATS (Boatid, Boat-name, Color)

1. Insert 5 to 10 rows in all tables?
2. Find the name of sailors who reserved boat number 3.
3. Find the name of sailors who reserved green boat.
4. Find the colors of boats reserved by "Ramesh".
5. Find the names of sailors who have reserved atleast one boat.
6. Find the all sailid of sailors who have a rating of 10 or have reserved boated 104.
7. Find the Sailid's of sailors with age over 20 who have not registered a red boat.
8. Find the names of sailors who have reserved a red or green boat.
9. Find sailors whose rating is better than some sailor called 'Salvador'.
10. Find the names of sailors who are older than the oldest sailor with

Schema Diagram for the rest of the SQL and PLSQL Programs.

3) Create the following tables based on the above Schema Diagram with appropriate data types and constraints.

EMPLOYEE (Fname, Mname, Lname, SSN, Bdate, Address, Gender, Salary, SuperSSN, Dno)

DEPARTMENT(Dnumber, Dname, MgrSSN, Mgrstartdate)

DEPENDENT (ESSN, Dependent Name, Gender, Bdate, Relationship)

- 1) Insert 5 to 10 rows into all the tables.
- 2) Display all employee's names along with their department names.
- 3) Display all employee's names along with their dependent details.
- 4) Display name and address of all employees who work for 'ECE' department.
- 5) List the names of all employees with two or more dependents.
- 6) List the names of employee who have no dependents.
- 7) List the names of employees who have at least one dependent.
- 8) List the names of the employees along with names of their supervisors using aliases.
- 9) Display name of the department and name of manager for all the departments.
- 10) Display the name of each employee who has a dependent with the same first name and gender as the employee.
- 11) List the names of managers who have at least one dependent.
- 12) Display the sum of all employees' salaries as well as maximum, minimum and average salary in the entire departments department wise if the department has more than two employees.
- 13) List the departments of each female employee along with her name.
- 14) List all employee names and also the name of the department they manage if they happen to manage a dept.
- 15) Display the name of the employee and his / her supervisor's name.

4) Create the following tables based on the above Schema Diagram with appropriate data types and constraints in addition to the tables in Experiment 2.

DEPT_LOCATIONS (Dnumber, Dlocation)

PROJECT (Pname, Pnumber, Plocation, Dnum)

WORKS_ON(ESSN, Pno, Hours).

- 1) Insert 5 to 10 rows into all the tables.
- 2) Find the names of the employees who work on all the projects controlled by the department 'ECM'.
- 3) List the project number, name and no. Of employees who work on that project for all the projects.
- 4) List the names of all the projects controlled by the departments department wise.
- 5) Retrieve the names of employees who work on all projects that 'John' works on.
- 6) List the project numbers for projects that involve an employee either as worker or as a manager of the department that controls the project.
- 7) List the names of all employees in one department who work more than 10 hours on one specific project.
- 8) For each project, list the project name and total hours (by all employees) spent on that project.
- 9) Retrieve the names of all employees who work on every project.
- 10) Retrieve the names of all employees who do not work on any project.
- 11) Display the name and total no. of hours worked by an employee who is working on maximum no. of projects among all the employees.
- 12) Display the names of all employees and also no. of hours, project names that they work on if they happen to work on any project(use outer join).
- 13) List the employee name, project name on which they work and the department they belong to for all the employees using alias names for the resulting columns.
- 14) Retrieve the names of all employees who work on more than one project department wise.
- 15) List all the departments that contain at least one occurrence of 'C' in their names.

5) Create a view that has project name, controlling department name, number of employees and total hours worked on the project for each project with more than one employee working on it.

- 1) List the projects that are controlled by one department from this view.
- 2) List the managers of the controlling departments for all the projects.
- 3) Demonstrate one update operation on this view.
- 4) List the Location of the controlling departments for all the projects.
- 5) Retrieve the data from the view.

PL/SQL LAB CYCLE

CYCLE-II

6. Write a PL/SQL Block to find whether the number is Armstrong or not.
7. Write a PL/SQL program for generating Fibonacci series
8. Write an anonymous PL/SQL block that fetches and displays the data from employee table to the console.
9. Write a program that updates salaries of all employees with 10% hike (use cursors).
10. Write a program to fetch salary and employee name from employee table for a given user input. When no data found raise an exception that prints the message "no data found".
11. Write a program to find the number of records of any given table using %ROWCOUNT.
12. Write a cursor to display the list of employees and total salary department wise.
13. Write a database trigger on employee table so that the trigger fires when all the DML statements are executed (print appropriate message).
14. Write a trigger in such a way that it should not allow insert or update or delete on Wednesday and Thursday and display the proper message.
15. Write a procedure to display the name and salary of employee when user inputs SSN using IN/OUT parameters.
16. Write a function to check the validity of the given employee number from the employee table (print the appropriate message using PL/SQL block).
17. Visit TPC and submit report.

Course Educational Objectives:

The major objective of this lab is to provide a strong formal foundation in database concepts, technology and practice to the participants to groom them into well-informed database application developers.

The sub-objectives are:

1. To give a good formal foundation on the relational model of data
2. To present SQL and procedural interfaces to SQL comprehensively
3. To give an introduction to systematic database design approaches covering conceptual design, logical design and an overview of physical design

Course Outcomes:

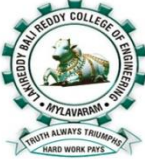

After the completion of the course, students should be able to

CO1: Understand, and effectively explain the underlying concepts of database design.

CO2: Design & implement a database schema for a given problem-domain.

CO3: Query a database using SQL DML/DDDL commands and apply enforce integrity constraints on a database.

CO4: Executing PL/SQL including stored procedures, stored functions, cursors and Triggers.

S180 - DATABASE MANAGEMENT SYSTEMS

Lecture	: 4 Periods/week	Internal Marks	: 25
Tutorial	: 1	External Marks	: 75
Credits	: 4	External Examination	: 3 Hrs

CYCLE-1

1) Create a table STUDENT with appropriate data types and perform the following queries.

Roll number, student name, date of birth, branch and year of study.

12. Insert 5 to 10 rows in a table?
13. List all the students of all branches
14. List student names whose name starts with 's'
15. List student names whose name contains 's' as third literal
16. List student names whose contains two 's' anywhere in the name
17. List students whose branch is NULL
18. List students of CSE & ECE who born after 1980
19. List all students in reverse order of their names
20. Delete students of any branch whose name starts with 's'
21. Update the branch of CSE students to ECE
22. Display student name padded with '*' after the name of all the students

2) Create the following tables based on the above Schema Diagram with appropriate data types and constraints and perform the following queries.

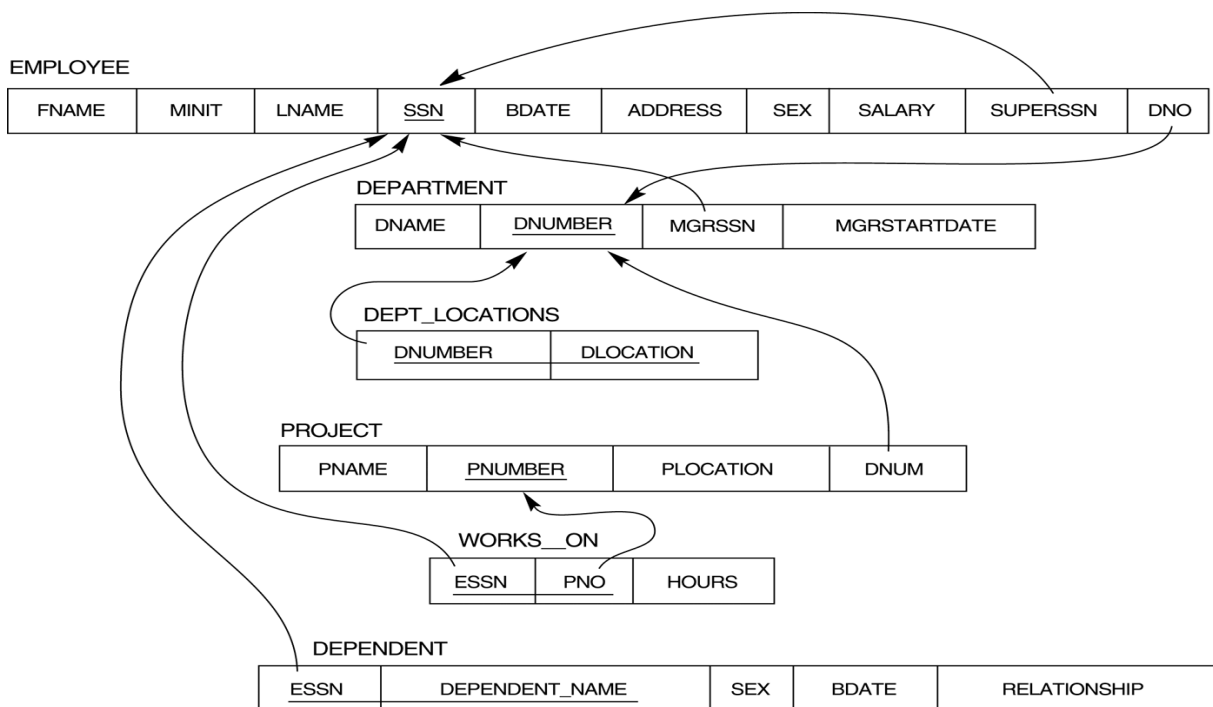

SAILORS (Sailid, Salname, Rating, Age)

RESERVES (Sailid, boatid, Day)

BOATS (Boatid, Boat-name, Color)

11. Insert 5 to 10 rows in all tables?
12. Find the name of sailors who reserved boat number 3.
13. Find the name of sailors who reserved green boat.
14. Find the colors of boats reserved by "Ramesh".
15. Find the names of sailors who have reserved atleast one boat.
16. Find the all sailid of sailors who have a rating of 10 or have reserved boated 104.
17. Find the Sailid's of sailors with age over 20 who have not registered a red boat.
18. Find the names of sailors who have reserved a red or green boat.
19. Find sailors whose rating is better than some sailor called 'Salvador'.
20. Find the names of sailors who are older than the oldest sailor with a rating of 10.

Schema Diagram for the rest of the SQL and PLSQL Programs.

3) Create the following tables based on the above Schema Diagram with appropriate data types and constraints.

EMPLOYEE (Fname, Mname, Lname, SSN, Bdate, Address, Gender, Salary, SuperSSN, Dno)

DEPARTMENT(Dnumber, Dname, MgrSSN, Mgrstartdate)

DEPENDENT (ESSN, Dependent Name, Gender, Bdate, Relationship)

- 16) Insert 5 to 10 rows into all the tables.
- 17) Display all employee's names along with their department names.
- 18) Display all employee's names along with their dependent details.
- 19) Display name and address of all employees who work for 'ECE' department.
- 20) List the names of all employees with two or more dependents.
- 21) List the names of employee who have no dependents.
- 22) List the names of employees who have at least one dependent.
- 23) List the names of the employees along with names of their supervisors using aliases.
- 24) Display name of the department and name of manager for all the departments.
- 25) Display the name of each employee who has a dependent with the same first name and gender as the employee.
- 26) List the names of managers who have at least one dependent.
- 27) Display the sum of all employees' salaries as well as maximum, minimum and average salary in the entire departments department wise if the department has more than two employees.
- 28) List the departments of each female employee along with her name.
- 29) List all employee names and also the name of the department they manage if they happen to manage a dept.
- 30) Display the name of the employee and his / her supervisor's name.

4) Create the following tables based on the above Schema Diagram with appropriate data types and constraints in addition to the tables in Experiment 2.

DEPT_LOCATIONS (Dnumber, Dlocation)

PROJECT (Pname, Pnumber, Plocation, Dnum)

WORKS_ON(ESSN, Pno, Hours).

- 16) Insert 5 to 10 rows into all the tables.
- 17) Find the names of the employees who work on all the projects controlled by the department 'ECM'.
- 18) List the project number, name and no. Of employees who work on that project for all the projects.
- 19) List the names of all the projects controlled by the departments department wise.
- 20) Retrieve the names of employees who work on all projects that 'John' works on.
- 21) List the project numbers for projects that involve an employee either as worker or as a manager of the department that controls the project.
- 22) List the names of all employees in one department who work more than 10 hours on one specific project.
- 23) For each project, list the project name and total hours (by all employees) spent on that project.
- 24) Retrieve the names of all employees who work on every project.
- 25) Retrieve the names of all employees who do not work on any project.
- 26) Display the name and total no. of hours worked by an employee who is working on maximum no. of projects among all the employees.
- 27) Display the names of all employees and also no. of hours, project names that they work on if they happen to work on any project(use outer join).
- 28) List the employee name, project name on which they work and the department they belong to for all the employees using alias names for the resulting columns.
- 29) Retrieve the names of all employees who work on more than one project department wise.
- 30) List all the departments that contain at least one occurrence of 'C' in their names.

5) Create a view that has project name, controlling department name, number of employees and total hours worked on the project for each project with more than one employee working on it.

- 6) List the projects that are controlled by one department from this view.
- 7) List the managers of the controlling departments for all the projects.
- 8) Demonstrate one update operation on this view.
- 9) List the Location of the controlling departments for all the projects.
- 10) Retrieve the data from the view.

PL/SQL LAB CYCLE

CYCLE-II

18. Write a PL/SQL Block to find whether the number is Armstrong or not.
19. Write a PL/SQL program for generating Fibonacci series
20. Write an anonymous PL/SQL block that fetches and displays the data from employee table to the console.
21. Write a program that updates salaries of all employees with 10% hike (use cursors).
22. Write a program to fetch salary and employee name from employee table for a given user input. When no data found raise an exception that prints the message "no data found".
23. Write a program to find the number of records of any given table using % ROWCOUNT.
24. Write a cursor to display the list of employees and total salary department wise.
25. Write a database trigger on employee table so that the trigger fires when all the DML statements are executed (print appropriate message).
26. Write a trigger in such a way that it should not allow insert or update or delete on Wednesday and Thursday and display the proper message.
27. Write a procedure to display the name and salary of employee when user inputs SSN using IN/OUT parameters.
28. Write a function to check the validity of the given employee number from the employee table (print the appropriate message using PL/SQL block).
29. Visit TPC and submit report.

Course Educational Objectives:

The major objective of this lab is to provide a strong formal foundation in database concepts, technology and practice to the participants to groom them into well-informed database application developers.

The sub-objectives are:

4. To give a good formal foundation on the relational model of data
5. To present SQL and procedural interfaces to SQL comprehensively
6. To give an introduction to systematic database design approaches covering conceptual design, logical design and an overview of physical design

Course Outcomes:

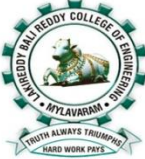

After the completion of the course, students should be able to

CO1: Understand, and effectively explain the underlying concepts of database design.

CO2: Design & implement a database schema for a given problem-domain.

CO3: Query a database using SQL DML/DDDL commands and apply enforce integrity constraints on a database.

CO4: Executing PL/SQL including stored procedures, stored functions, cursors and Triggers.

S180 - DATABASE MANAGEMENT SYSTEMS

Lecture	: 4 Periods/week	Internal Marks	: 25
Tutorial	: 1	External Marks	: 75
Credits	: 4	External Examination	: 3 Hrs

UNIT - I

Introduction: An overview of database management system, database system Vs file system, Database system concepts and architecture, data models schema and instances, data independence and data base language and interfaces, Data definitions language, DML, Overall Database Structure.

Data modeling using the Entity Relationship Model: ER model concepts, notation for ER diagram, mapping constraints, keys, Concepts of Super Key, candidate key, primary key, Generalization, aggregation, reduction of an ER diagrams to tables, extended ER model, relationships of higher degree.

UNIT - II

Relational data Model and Language: Relational data model concepts, integrity constraints: entity integrity, referential integrity, Keys constraints, Domain constraints, relational algebra.

Introduction to SQL: Characteristics of SQL, Advantage of SQL. SQL data types and literals. Types of SQL commands. SQL operators and their procedure. Tables, views and indexes. Queries and sub queries. Aggregate functions. Insert, update and delete operations. Joins, Unions, Intersection, Minus, Cursors in SQL.

UNIT - III

Normalization: Functional dependencies, normal forms, first, second, third normal forms, BCNF, inclusion dependences, loss less join decompositions, normalization using FD, MVD, and JDs, alternative approaches to database design.

UNIT – IV

Transaction Processing Concepts: Transaction system, Testing of serializability, Serializability of schedules, conflict & view serializable schedule, recoverability, log based recovery, checkpoints, ARIES algorithm, deadlock handling. **Concurrency Control Techniques:** Concurrency control, locking Techniques for concurrency control, Time stamping protocols for concurrency control, validation based protocol, multiple granularity, Recovery with concurrent transactions.

UNIT-V

Storage and Indexing: RAID levels, page formats, record formats, file types and organization, ISAM, B-tree, B+-tree.

TEXT BOOK

1. "Database Concepts", Korth, Silbertz, Sudarshan, McGraw Hill.
2. "Fundamentals Of Database Systems", Elmasri, Navathe, Addison Wesley.

REFERENCES

1. "Database Management System", Raghu Ramakrishnan, McGraw Hill
2. "DBMS: Complete Practical Approach", Maheshwari Jain, Firewall Media, New Delhi.
3. "An Introduction To Database System", Date C J, Addison Wesley.

Prerequisite: Elementary set theory, concepts of relations and functions, propositional logic data structures (trees, Graphs, dictionaries)& File Concepts.

Course Educational Objectives:

This course enables the students to know about

- DBMS basic concepts, Database Languages.
- Data base Design.
- Normalization process and Transaction processing.
- Indexing.

Course Outcomes:

After the completion of the course, students should be able to

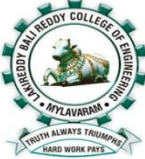

CO1: Understand DBMS concepts, architecture & Data model.

CO2: Apply the concepts of relational algebra, calculus, and also SQL.

CO3: Apply the normalization process for data base design.

CO4: Understand the issues in transaction processing and Analyze different Concurrency and recovery strategies of DBMS

CO5: Analyze different file organization techniques & Indexing Techniques.

S180 - DATABASE MANAGEMENT SYSTEMS

Lecture	: 4 Periods/week	Internal Marks	: 25
Tutorial	: 1	External Marks	: 75
Credits	: 4	External Examination	: 3 Hrs

UNIT - I

Introduction: An overview of database management system, database system Vs file system, Database system concepts and architecture, data models schema and instances, data independence and data base language and interfaces, Data definitions language, DML, Overall Database Structure.

Data modeling using the Entity Relationship Model: ER model concepts, notation for ER diagram, mapping constraints, keys, Concepts of Super Key, candidate key, primary key, Generalization, aggregation, reduction of an ER diagrams to tables, extended ER model, relationships of higher degree.

UNIT - II

Relational data Model and Language: Relational data model concepts, integrity constraints: entity integrity, referential integrity, Keys constraints, Domain constraints, relational algebra.

Introduction to SQL: Characteristics of SQL, Advantage of SQL. SQL data types and literals. Types of SQL commands. SQL operators and their procedure. Tables, views and indexes. Queries and sub queries. Aggregate functions. Insert, update and delete operations. Joins, Unions, Intersection, Minus, Cursors in SQL.

UNIT - III

Normalization: Functional dependencies, normal forms, first, second, third normal forms, BCNF, inclusion dependences, loss less join decompositions, normalization using FD, MVD, and JDs, alternative approaches to database design.

UNIT – IV

Transaction Processing Concepts: Transaction system, Testing of serializability, Serializability of schedules, conflict & view serializable schedule, recoverability, log based recovery, check points, ARIES algorithm, deadlock handling. **Concurrency Control Techniques:** Concurrency control, locking Techniques for concurrency control, Time stamping protocols for concurrency control, validation based protocol, multiple granularity, Recovery with concurrent transactions.

UNIT-V

Storage and Indexing: RAID levels, page formats, record formats, file types and organization, ISAM, B-tree, B+-tree.

TEXT BOOK

1. "Database Concepts", Korth, Silbertz, Sudarshan, McGraw Hill.
2. "Fundamentals Of Database Systems", Elmasri, Navathe, Addison Wesley.

REFERENCES

1. "Database Management System", Raghu Ramakrishnan, McGraw Hill
2. "DBMS: Complete Practical Approach", Maheshwari Jain, Firewall Media, New Delhi.
3. "An Introduction To Database System", Date C J, Addison Wesley.

Prerequisite: Elementary set theory, concepts of relations and functions, propositional logic data structures (trees, Graphs, dictionaries)& File Concepts.

Course Educational Objectives:

This course enables the students to know about

- DBMS basic concepts, Database Languages.
- Data base Design.
- Normalization process and Transaction processing.
- Indexing.

Course Outcomes:

After the completion of the course, students should be able to

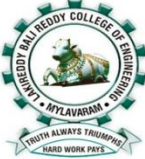

CO1: Understand DBMS concepts, architecture & Data model.

CO2: Apply the concepts of relational algebra, calculus, and also SQL.

CO3: Apply the normalization process for data base design.

CO4: Understand the issues in transaction processing and Analyze different Concurrency and recovery strategies of DBMS

CO5: Analyze different file organization techniques & Indexing Techniques.

L155 – JAVA PROGRAMMING LAB

Lecture	: 3 Periods/week	Internal Marks	: 25
		External Marks	: 50
Credits	: 2	External Examination	: 3 Hrs

Course Educational Objectives:

To make students enable to

- Know the importance of implementing application in JAVA.
- Understand and Execute applications through JAVA (at core level).
- Implements concurrent execution of processes (threads), handling exceptions and OOP principles.
- Introduce the base for developing GUI based applications and Networking concepts.

Course Outcomes:

After completion of this course student shall able to,

CO1: Design & Implement various Packages, Interfaces, Exception handling & Multithreading.

CO2: Design various Applet programs Using Graphics class & AWT.

CO3: Develop applications on Database connectivity using JDBC.

Pre requisite: Knowledge of java syntaxes and notations.

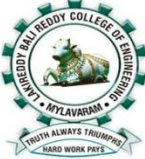

1. a) Write a java program to generate Fibonacci series.

- b) Write a java program to check whether given number is prime or not?
- 2. a) Write a java program to find out area of a circle.
b) Write a java program to reverse the given number.
- 3. a) Write a java program to find the sum of the numbers by using Command line arguments.
b) Write a java program to find the roots of a quadratic equation.
- 4. a) Write a java program to find the factorial of a given number using recursion.
b) Write a java program to find sum of 'n' numbers using Recursion?
- 5. a) Write a java program to find min and max number of given Array.
b) Write a java program to perform matrix Multiplication.
- 6 a) Write a java program to search an element by using linear search.
b) Write a java program by using Bubble sort?
- 7 a) Write a java program to implement Over Loading?
b) Write a java program using Constructors.

- 8 a) Write a java program using StringBuffer?
b) Write a java program to check whether the given string is palindrome (or) not?
c) Write a java program length and capacity using StringBuffer class.
- 9 a) Write a java program to sort the Strings in ascending order.
b) Write a java program to implement stack ADT?
- 10 a) Write a java program using Inheritance.
b) Write a java program by using super key word.

- 11 a) Write a java program using Abstract class.
b) Write a java program by using final variables and final methods.

- 12 a) Write a java program to implement Overriding?
b) Write a java program to implement Dynamic method dispatch?
- 13 a) Write a java program to demonstrate Packages.
b) Write a java program to implement Multiple inheritance using interfaces.
- 14 a) Write a java program by using Exception handling mechanism.
b) Write a java program to create Multiple Threads.
- 15 a) Write a java program to find sum of n numbers using StringTokenizer.
b) Write a java program to find sum of the numbers using StringTokenizer.
- 16 a) Write a simple Applet program.
b) Write an applet program using Graphics.
- 17 a) Write an applet program to pass parameters to Applet.
b) Write an applet program to display information an applet.
- 18 a) Write an applet program to handle Mouse events.
b) Write an applet program using Key events?
- 19 a) Write a java program by using AWT components.
b) Write a java program to implement arithmetic calculator.
- 20 a) Write a java program to establish a connection with data base and perform some SQL
Commands like create, insert, update delete.
b) Write a JDBC program to perform SQL commands using prepared statement.
- 21 a) Write a JDBC Program to execute stored procedure using callable statement.
b) Write a JDBC program to execute stored function using callable statement.

b) Write a java program using Constructors.

- 8 a) Write a java program using StringBuffer?
b) Write a java program to check whether the given string is palindrome (or) not?
c) Write a java program length and capacity using StringBuffer class.
- 9 a) Write a java program to sort the Strings in ascending order.
b) Write a java program to implement stack ADT?
- 10 a) Write a java program using Inheritance.
b) Write a java program by using super key word.

- 11 a) Write a java program using Abstract class.
b) Write a java program by using final variables and final methods.

- 12 a) Write a java program to implement Overriding?
b) Write a java program to implement Dynamic method dispatch?
- 13 a) Write a java program to demonstrate Packages.
b) Write a java program to implement Multiple inheritance using interfaces.
- 14 a) Write a java program by using Exception handling mechanism.
b) Write a java program to create Multiple Threads.
- 15 a) Write a java program to find sum of n numbers using StringTokenizer.
b) Write a java program to find sum of the numbers using StringTokenizer.
- 16 a) Write a simple Applet program.
b) Write an applet program using Graphics.
- 17 a) Write an applet program to pass parameters to Applet.
b) Write an applet program to display information an applet.
- 18 a) Write an applet program to handle Mouse events.
b) Write an applet program using Key events?
- 19 a) Write a java program by using AWT components.
b) Write a java program to implement arithmetic calculator.
- 20 a) Write a java program to establish a connection with data base and perform some SQL
Commands like create, insert, update delete.
b) Write a JDBC program to perform SQL commands using prepared statement.
- 21 a) Write a JDBC Program to execute stored procedure using callable statement.
b) Write a JDBC program to execute stored function using callable statement.

Applet Class: Concepts of Applets, differences between applets and applications, applet architecture, skeleton, creating applets, passing parameters to applets, working with graphics class.

UNIT – IV

Event Handling: Events handling mechanisms, Events, Event sources, Event classes, Event Listeners interfaces, Delegation event model, handling mouse and keyboard events, Adapter classes, inner classes.

AWT controls: label, button, scrollbars, text components, check box, check box groups, choices controls, lists, scrollbar, text field, layout managers – border, grid, flow, card, Containers.

UNIT-V

JDBC: Introduction, Types of Drivers, Procedure to establish a connection between java applications and database, types of statements, Result set types.

Networking: basics, address, ports, sockets.

TEXT BOOK

Herbert schildt, Java: the complete reference, TMH Publications, 5th edition.

4. Java Examples In a nutshell – A Tutorial companion to java in a nutshell (O'REILLY)
5. N.B.Venkateswarlu, E.V.Prasad, OOP through java, S chand 2010.

Prerequisite: The basic knowledge of Object oriented programming methodology and Graphical User Interface components.

Course Educational Objectives:

To make students enable to

- Concentrates on the methodological and technical aspects of software design and programming based on OOP.
- Acquire the basic knowledge and skills necessary to implement object-oriented programming techniques in software development through JAVA.

- Know about the importance of GUI based applications and the development of those applications through JAVA.
- Get sufficient knowledge to enter the job market related to Web development.

Course Outcomes:

After completion of this course student should be able to,

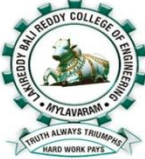

CO1: Understand & learn the history, Buzz words and the basic constructs of Java as per OOP concepts.

CO2: Understand the importance of Packages, Interfaces, Exception handling and have the ability to implement them as per real time scenarios.

CO3: Understand and analyze how Applet class & Multithreading are implemented in Java.

CO4: Analyze the importance of GUI, Event Handling and Implement GUI based applications using AWT.

CO5: Learn the basic concepts of JDBC and networking and to develop applications on Database Connectivity.

Faculty Name	: M.SRI BALA, sr. ASSIST. PROFESSOR		
Subject Name	: PRINCIPLES OF PROGRAMMING LANGUAGES	Code	: S350
Year	: II	Semester	: IV SEM
Degree	: B. Tech IV SEM	Programme	: C.S.E

COURSE OUTCOMES:

After the completion of the course, students should be able to,

1. To identify the factors that influence any programming language design based on specific evaluation criteria and distinguish among different language paradigms and implementation methods.
2. To understand the different syntax describing methods and their notations for common language features along with the specified rules and solutions for the identified basic problems of parsing.
3. To study the principles regarding variables and data types, along with all issues of implementations for primitive types, structured types, user defined types and abstract types supported in different programming languages.
4. To distinguish among different statement level features offered in different languages for providing control abstraction from the implementation view point.
5. To understand the principles of unit level abstraction facility in different programming languages in terms of sub programs and their synchronization and communication aspects.

S No.	Tentative Date	Topics to be covered	Actual Date	Num. of classes	Content Delivery Methods
UNIT-I: Preliminary Concepts					
1.	25-1-2016	Introduction		1	DM1,DM1
2.	28-1-2016	Reasons for studying concepts of programming languages		1	DM1
3.	29-1-2016	Programming domains		1	DM1
4.	30-1-2016	Language Evaluation Criteria		1	DM1
5.	1-2-2016	Language Evaluation Criteria		1	DM1
6.	2-2-2016	TUTORIAL		1	DM1
7.	4-2-2016	influences on Language design		1	DM1
8.	5-2-2016	Language categories		1	DM2
9.	6-2-2016	Programming Paradigms		1	DM1,DM1
10.	8-2-2016	ProgrammingLanguage Implementation		1	DM1
11.	9-2-2016	ProgrammingLanguage Implementation		1	DM1
12.	11-2-2016	influences on Language design		1	DM1
13.	12-2-2016	Compilation and Virtual Machines		1	DM2
14.	13-2-2016	Compilation and Virtual Machines		1	DM1
15.	15-2-2016	programming Environments		1	DM1
16.	17-2-2016	TUTORIAL		1	DM1
17.		Unit end Test-1		1	DM4
UNIT-II: Syntax and Semantics					
18	18-2-2016	general Problem of describing Syntax and Semantics		1	DM1
19	19-2-2016	general Problem of describing Syntax and Semantics		1	DM1
20	20-2-2016	formal methods of describing syntax		1	DM1
21	22-2-2016	formal methods of describing syntax		1	DM2
22	23-2-2016	BNF, EBNF for common programming languages features		1	DM1
23	25-2-2016	parse trees, ambiguous grammars,		1	DM1
24	26-2-2016	attribute grammars		1	DM1
25	27-2-2016	TUTORIAL		1	DM1
26	1-3-2016	Names, Bindings, and Scopes Introduction		1	DM1
27	2-3-2016	Names		1	DM1
28	4-3-2016	Variables		1	DM1
29	5-3-2016	The Concept of Binding		1	DM2
30	7-3-2016	The Concept of Binding		1	DM1
31	8-3-2016	Scope		1	DM1
32	10-3-2016	Life time		1	DM1
33	11-3-2016	TUTORIAL		1	DM3

34	12-3-2016	Unit end test 2		1	DM4
14-03-2016 TO 19-03-2016 IST MID EXAMINATIONS					
UNIT-III: Data types					
35	21-3-2016	Introduction to data types		1	DM1
36	22-3-2016	primitive, character, user defined		1	DM1
37	24-3-2016	primitive, character, user defined		1	DM1
38	25-3-2016	array, associative, record, union		1	DM1
39	26-3-2016			1	DM1
40	28-3-2016	Names, Variable, concept of binding		1	DM2
41	29-3-2016	type checking, strong typing, type compatibility, named constants, variable initialization		1	DM1
42	31-3-2016	type checking, strong typing, type compatibility, named constants, variable initialization TUTORIAL		1	DM1
43	1-4-2016	Abstractions and encapsulation,		1	DM1
44	2-4-2016	introductions to data abstraction, design issues, language examples		1	DM1
45	4-4-2016	C++ parameterized ADT,		1	DM2
46	5-4-2016	object oriented programming in small talk, C++, Java TUTORIAL		1	DM1
47	7-4-2016	Unit end test 3		1	DM4
UNIT-IV: Expressions and Statements					
48	8-4-2016	Arithmetic relational and Boolean expressions		1	DM1
49	11-4-2016	Short circuit evaluation mixed mode assignment		1	DM1
50	12-4-2016	Assignment Statements		1	DM1
51	14-4-2016	Control Structures – Statement Level TUTORIAL		1	DM1
52	15-4-2016	Compound Statements, Selection, Iteration		1	DM1
53	16-4-2016	Compound Statements, Selection, Iteration		1	DM1
54	18-4-2016	Unconditional Statements		1	DM2
55	19-4-2016	Unconditional Statements		1	DM1
56	21-4-2016	guarded commands		1	DM1
57	22-4-2016	TUTORIAL		1	DM1
58	23-4-2016	Unit end test 4		1	DM1

UNIT-V: Subprograms and Blocks					
59	25-4-2016	Fundamentals of sub-programs		1	DM1
60	26-4-2016	Scope and lifetime of variable		1	DM1
61	28-4-2016	static and dynamic scope		1	DM1
62	29-4-2016	Design issues of subprograms and operations		1	DM1
63	30-4-2016	local referencing environments		1	DM2
64	2-5-2016	TUTORIAL		1	DM1
65	3-5-2016	parameter passing methods		1	DM1
66	5-5-2016	parameters that are sub-program names		1	DM1
67	6-5-2016	parameters that are sub-program names			
68	7-5-2016	issues for functions user defined overloaded operators			
69	9-5-2016	Synchronization		1	DM4
70	10-5-2016	Synchronization		1	DM1
71	12-5-2016	Concurrency concepts.		1	DM1
72	13-5-2016	Concurrency concepts.		1	DM1
SUMMER VACATION 16-5-2016 TO 31-5-2016					
73	2-6-2016	TUTORIAL		1	DM1
74	3-6-2016	Unit end test 5		1	DM1
75	4-6-2016	Revision		1	DM1
76	6-6-2016	Revision		1	DM1
77	7-6-2016	Revision		1	DM1
II ND MID EXAMINATIONS 08-06-2016 TO 15-06-2016					
			Total	77	
Total number of classes required to complete the syllabus					74
Total number of classes available as per Schedule					77

NOTE: DELIVERY METHODS :DM1: Lecture interspersed with discussions/BB, DM2: Tutorial, DM3: Lecture with a quiz, DM4: Assignment/Test, DM5: Demonstration (laboratory, field visit), DM6: Presentations/PPT

At the End of the course, students attained the **Course Outcomes:CO1,CO2,CO3,CO4,CO5** & sample proofs are enclosed in Course file.

	LESSON PLAN	Date:
	Subject : SOFTWARE ENGINEERING Branch : CSE Semester : IV Section : A	27-01-2016 To 15-06-2016

S381 – SOFTWARE ENGINEERING

Lecture	: 4 Periods/week	Internal Marks	: 25
Marks			
Tutorial	: 1	External Marks	: 75 Marks
Credits	: 4	External Examination	: 3 Hrs

UNIT – I:

Introduction to Software Engineering: The Evolving role of Software, Software, Changing nature of Software, Legacy Software, and Software Myths.

Software Process: Layered Technology, Process Framework, CMMI, Process Patterns, Assessment, Personal and Team Process Models, Process Technology, Process and Product.

UNIT – II:

Process Models: Prescriptive Models, Waterfall Model, Incremental, Evolutionary and Specialized Process Models, Unified Process.

Software Engineering Practice: Communication Practices, Planning Practices, Modeling Practices, Construction Practice and Deployment.

UNIT – III:

Requirements Engineering: A bridge to design and construction, RE Tasks, Initiating the RE Process, Eliciting Requirements, Developing Use Cases, Building the Analysis Models, Negotiating and Validating Requirements.

Building the Analysis Model: Requirements Analysis, Analysis Modeling Approaches, Data Modeling Concepts, OOA, Scenario based Modeling, Flow Rated Modeling, Class based Modeling, Creating a Behavior Model.

UNIT – IV:

Design Engineering: Design within the Context of Software Engineering, Design Process and Software Quality, Design Concepts, Design Model, Pattern based Software Design.

Creating an Architectural Design: Software Architecture, Data Design, Architectural Styles and Patterns, Architectural Design.

UNIT – V:

Testing Strategies: A Strategic Approach to Software Testing, Strategic Issues, Test Strategies for Conventional Software, Object Oriented Software, Validation Testing, System Testing.

The Art of Testing Tactics: Software Testing Fundamentals, White Box testing, basis Path Testing, Control Structure Testing, Black Box Testing, OO testing Methods.

TEXT BOOK:

- Roger S. Pressman, Software Engineering – A Practitioner’s Approach, Mc. Graw-Hill International Edition, 6th Edition, 2005.

REFERENCES:

1. Ian Sommerville, “Software Engineering”, Pearson Education, 8th Edition, 2008.
2. Ali Behforooz and Frederick J. Hudson, “Software Engineering Fundamentals”, Oxford University Press, New Delhi, 1996.
3. Stephan Schach, “Software Engineering”, Tata Mc. Graw-Hill, 2007.

4. Pfleeger and Lawrence, "Software Engineering: Theory and Practice", Pearson Education, Second Edition, 2001, 1995, PHI.

PRE-REQUISITE:

- The students should have basic knowledge in C Programming and DBMS.

COURSE EDUCATIONAL OUTCOMES:

After learning this course, Student:

- Understands different software processes and how to choose between them.
- Identifies how to understand requirements from a client and specify them.
- Design in the large, including principled choice of software architecture, the use of modules and interfaces to enable separate development, and design patterns.
- Understands good code practices, including documentation, contracts, regression tests and daily builds.
- Various quality assurance techniques, including unit testing, functional testing and automated analysis tools.

COURSE OUTCOMES:

After the completion of the course, students should be able to:

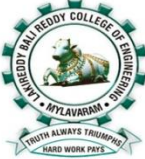

CO-1: Understand the significance of software engineering and software process concepts.

CO-2: Gain knowledge about different software development process models and software engineering practices.

CO-3: Acquire knowledge about requirements gathering and analysis models.

CO-4: Learn about software development cycle with emphasis on design engineering that includes architectural styles, patterns and architectural design.

CO-5: Understand various software testing approaches for testing the software.

52	Object Oriented Analysis	9/4/16		2	1,6	
53	Scenario Based Modeling	12/4/16		2	1,6	
54	Flow Oriented Modeling	13/4/16		2	1,6	
55	Class Based Modeling	16/4/16		2	1,6	
56	Creating a Behavioral Model	19/4/16		2	1,6,9	
57	TUTORIAL & TEST - 3	20/4/16				3,4
UNIT – IV						
58	Design Engineering: Design within context of Software Engineering	21/4/16		2	1,9	1, 3, 5, 7
59	Design Process and Design Quality	22/4/16		2	1,9	
60	Design Concepts	23/4/16		2	1	

61	Design Model	26/4/16		2	1,9	
62	Pattern Based Software Design	27/4/16		2	1,9	
63	Software Architecture and Data Design	28/4/16		2	1,9	
64	Architectural Styles and Patterns – 1	29/4/16		2	1,6,9	
65	Architectural Styles and Patterns – 2	30/4/16		2	1,6,9	
66	Architectural Design	3/5/16		2	1,9	
67	TUTORIAL & TEST - 4	4/5/16				
UNIT – V						
68	A Strategic Approach to Software Testing	5/5/16		2	1	1, 3, 5, 7
69	Strategic Issues	6/5/16		2	1	
70	Test Strategies for Conventional Software - 1	7/5/16		2	1,6	
71	Test Strategies for Conventional Software – 2	10/5/16		2	1,6	
72	Test Strategies for Object Oriented Software	11/5/16		2	1,6	
73	Validation Testing	12/5/16		2	1	
74	System Testing	13/5/16		2	1	
75	The art of Debugging	14/5/16		2	1	
76	Software Testing Fundamentals	1/6/16		2	1	
77	White Box Testing & Basis Path Testing	2/6/16		2	1,9	
78	Control Structure and Black Box Testing	3/6/16		2	1,9	
79	Black Box Testing and OO Testing	4/6/16		2	1,9	
80	TUTORIAL & TEST - 5	7/6/16				
81	MID - II EXAMS	8/6/16				
82		9/6/16				
83		10/6/16				
84		14/6/16				
85		15/6/16				

RESOURCES USED:

TEXT BOOK:

- Roger S. Pressman, Software Engineering – A Practitioner’s Approach, Mc. Graw-Hill International Edition, 6th Edition, 2005.

REFERENCES:

- Ian Sommerville, “Software Engineering”, Pearson Education, 8th Edition, 2008.
- Ali Behforooz and Frederick J. Hudson, “Software Engineering Fundamentals”, Oxford University Press, New Delhi, 1996.
- Stephan Schach, “Software Engineering”, Tata Mc. Graw-Hill, 2007.
- Pfleeger and Lawrence, “Software Engineering: Theory and Practice”, Pearson Education, Second Edition, 2001, 1995, PHI.

ASSESSMENT SUMMARY:

Assessment Task	Weight age (Marks)	Course Outcomes				
		CO1	CO2	CO3	CO4	CO5
Assignments/ Quiz/ Tutorials/ Surprise Tests	05					
Mid Exams	20					
Model Exams	--					
End Exam	75					
Attendance	--					
Total	100					

MAPPING COURSE OUTCOMES WITH PROGRAMME OUTCOMES:

Course Code	Unit	Course Outcomes					Programme Outcomes												
		1	2	3	4	5	1	2	3	4	5	6	7	8	9	10	11	12	
S381	I	x															L	M	
	II		x														L	M	
	III			x													L	M	
	IV				x					M			L			L			
	V					x				M									

Course Code	CO	Programme Specific Outcomes					
		1	2	3	4	5	6
S381	I				S		
	II				S		
	III				S		
	IV				S		M
	V				S		

Name	Instructor	Course Coordinator	Head of the Department
	SK. Johny Basha	Dr. Ch. V. Narayana Reddy	Dr. N. Ravi Shankar
