	<b>LESSON PLAN</b>	
	<b>DEPARTMENT:</b> CSE <b>COURSE:</b> DESIGN AND ANALYSIS OF ALGORITHMS <b>Semester&amp; Sections:</b> V & A-sec	<b>PROGRAM:</b> B.Tech <b>Academic year:</b> 2017-18

**1. Prerequisite:** Knowledge of Programming ,Discrete Mathematics and Data Structures.

**2. Course Educational objectives:**

Students undergoing this course are expected to:

Identify the fundamental concepts of various algorithm design techniques. Make the students familiar to conduct performance evaluation of algorithms. Expertise the students with the various existing algorithm design techniques. Motivate the students to design new algorithms for various problems.

**3. Course Outcomes:**

After the completion of the course, students should be able to

**CO1:**Identify the basic properties and analysis methods of algorithms and design divide and conquer paradigm for solving a few example problems and analyze them.

**CO2:**Design Greedy algorithms for knapsack problem, minimum cost spanning tree,single source shortest path problem and analyze them.

**CO3:**Apply dynamic programming paradigm to solve travelling sales person problem,0/1 knapsack problem,Optimal binary search tree.

**CO4:**Apply traversal methods on search trees and search methods on graphs and backtracking search methods on state space trees for few example problems.

**CO5:**Analyse branch and Bound search methods through problems such as 0/1 knapsack problem,Travelling sales personn problem and evaluate P ,NP,NP hard,NP complete class of problems and algorithms.

## COURSE HANDOUT

<b>PROGRAM</b>	: B.Tech., V-Sem., CSE, section- A & B
<b>ACADEMIC YEAR</b>	: 2017-18
<b>COURSE NAME &amp; CODE</b>	: Computer Networks & S168
<b>L-T-P STRUCTURE</b>	: 3-1-0
<b>COURSE CREDITS</b>	: 3
<b>COURSE INSTRUCTOR</b>	: Dr. Ch. V. Nayana
<b>COURSE COORDINATOR</b>	: Dr. Ch. V. Nayana

**COURSE OBJECTIVE:** This course provides an overview of network hardware and software for different computer networks. It also gives knowledge about the design issues and protocols of data link layer, network layer, transport layer and application layer of OSI/TCP/IP reference models. The course also introduces routing, congestion control, flow control algorithms and Domain Name System to design secure computer networks.

### **COURSE ARTICULATION MATRIX (Correlation between COs & POs, PSOs):**

CO	Statement	PO												PSO					
		1	2	3	4	5	6	7	8	9	10	11	12	1	2	3			
1	Analyze need of network hardware and software for different computer networks	2															3		
2	Solve design issues and implement protocols at data link layer	2		3	3												3		
3	Realize routing and congestion control algorithms at network layer	2		3	3												3		
4	Classify services and implement TCP/UDP protocols at transport layer	2		3	3												3		
5	Design secure computer network with various protocols			3	3				2								3	2	1

**Note:** Enter Correlation Levels **1** or **2** or **3**. If there is no correlation, put '-'  
**1**- Slight (Low), **2** - Moderate(Medium), **3** - Substantial (High).

## LESSON PLAN

**Department: CSE**  
**Course: – Theory of Computation**  
**SEM: V**

**Program: B.Tech**

**Academic Year: 2017-18**

**1. Pre-requisites:** Knowledge in mathematics, including a course in Discrete mathematics, and in programming.

**2. Course Educational Objectives (CEOs):**

1. Basic understanding of the notion of a regular set and its representation by DFA's, NFA's, and regular expressions.
2. To study abstract models of information processing machines and limits of digital computation
3. Basic understanding of the notion of a context-free language and its representation by context-free grammars and push-down automata.

**3. Course Outcomes (COs):** At the end of the course, the student will be able to:

CO1: Able to Understand the functioning of Finite-State Machines, Deterministic Finite-State Automata and Nondeterministic Finite-State Automata.
CO2: Able to Create Automata to accept strings from various simple languages.
CO3: Able to Discuss the different languages like Regular, Context-Free and Context-Sensitive languages;
CO4: Able to Convert from Push Down Automata to Context –Free Grammars and Vice-Versa.
CO5 Able to Design the Turing Machines and understanding of the notion of an undecidable problems.

**4. Course Articulation Matrix:**

**4. Prerequisite:** Knowledge of Programming ,Discrete Mathematics and Data Structures.

**5. Course Educational objectives:**

Students undergoing this course are expected to:

Identify the fundamental concepts of various algorithm design techniques. Make the students familiar to conduct performance evaluation of algorithms. Expertise the students with the various existing algorithm design techniques. Motivate the students to design new algorithms for various problems.

**6. Course Outcomes:**

After the completion of the course, students should be able to

**CO1:**Identify the basic properties and analysis methods of algorithms and design divide and conquer paradigm for solving a few example problems and analyze them.

**CO2:**Design Greedy algorithms for knapsack problem, minimum cost spanning tree,single source shortest path problem and analyze them.

**CO3:**Apply dynamic programming paradigm to solve travelling sales person problem,0/1 knapsack problem,Optimal binary search tree.

**CO4:**Apply traversal methods on search trees and search methods on graphs and backtracking search methods on state space trees for few example problems.

**CO5:**Analyse branch and Bound search methods through problems such as 0/1 knapsack problem,Travelling sales personn problem and evaluate P ,NP,NP hard,NP complete class of problems and algorithms.

#### UNIT - I

**Introduction** Computer-System Organization, Computer-System Architecture, Operating System Structure, Operating-System Operations, Process Management, Memory Management, Storage Management, Protection and Security, Distributed Systems, Special-Purpose Systems

**Operating-System Structures-** Operating-System Services , User Operating-System Interface, System Calls , Types of System Calls, System Programs , Operating-System Design and Implementation, Operating-System Structure, Virtual Machines, Operating-System Generation, System Boot.

#### UNIT - II

**Processes-Concept**, Process Scheduling, Operations on Processes, Inter-process Communication, Examples of IPC Systems, Communication in Client-Server Systems

**Multithreaded Programming-** Multithreading Models, Thread Libraries, Threading Issues.

**Process Scheduling:** Scheduling Criteria, Scheduling Algorithms, Multiple-Processor Scheduling.

#### UNIT – III

**Synchronization-**The Critical-Section Problem, Peterson’s Solution, Synchronization Hardware, Semaphores, Classic Problems of Synchronization, Monitors, Synchronization Examples, and Atomic Transactions.

**Deadlocks-** System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention. Deadlock Avoidance, Deadlock Detection, Recovery from deadlock.

## UNIT – IV

**Memory Management Strategies** Swapping, Contiguous Memory Allocation, Paging, Structure of the Page Table, Segmentation.

**Virtual Memory Management** Demand Paging, Page Replacement, Allocation of Frames, Thrashing, Memory-Mapped Files, Allocating Kernel Memory.

## UNIT-V.

**Implementing File System:** File-System Structure, File-System Implementation, Directory Implementation, Allocation Methods, Free-Space Management, Efficiency and Performance, Recovery.

## TEXT BOOK

1. Silberschatz & Galvin, 'Operating System Concepts', 7<sup>th</sup> edition, Wiley.

2. Charles Crowley, 'Operating Systems: A Design-Oriented Approach', TMH Publications, 1998 edition.
3. Andrew S.Tanenbaum, 'Modern Operating Systems', 2<sup>nd</sup> edition, 1995, PHI.

**Pre requisite:** Knowledge of system and its resources for running a process.

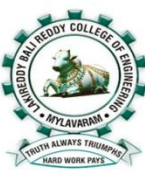

## Course Educational Objectives:

- ✓ The main objective of the course is to provide basic knowledge of computer operating system structure and functioning.
- ✓ Students able to understand how Operating Systems evolved with advent of computer architecture. Comprehend the different CPU scheduling algorithms, page replacement algorithms and identify best one.
- ✓ Able to understand and find the best mechanism for handling deadlocks. Also understand File and directory management.

## Course Outcomes

- ✓ After successful completion of this course student shall able to,

- ✓ Understand the Operating System (OS) in different viewpoints. Learn the basic reasons for necessity of an OS in our computer and what necessary services it provides to the computer users. Also know the primary concepts of different operating systems structure.
- ✓ Understand the concept of process management, CPU scheduling algorithms and able to identify which CPU scheduling algorithm is efficient.
- ✓ Understand the importance of synchronization and how to handle deadlocks.
- ✓ Know how memory management strategies such as paging and segmentation.
- ✓ Appreciate concepts of virtual memory, demand paging and page replacement algorithms. Comprehend and analyze the importance of different file structures that are used in file storage system.
- ✓ Learn the basic concepts of directory implementation, free-space management and file recovery.

**Hrs**

-----

-----  
**UNIT - I**

**Introduction** Computer-System Organization, Computer-System Architecture, Operating System Structure, Operating-System Operations, Process Management, Memory Management, Storage Management, Protection and Security, Distributed Systems, Special-Purpose Systems

**Operating-System Structures-** Operating-System Services , User Operating-System Interface, System Calls , Types of System Calls, System Programs , Operating-System Design and Implementation, Operating-System Structure, Virtual Machines, Operating-System Generation, System Boot.

**UNIT - II**

**Processes-Concept**, Process Scheduling, Operations on Processes, Inter-process Communication, Examples of IPC Systems, Communication in Client-Server Systems

**Multithreaded Programming-** Multithreading Models, Thread Libraries, Threading Issues.

**Process Scheduling:** Scheduling Criteria, Scheduling Algorithms, Multiple-Processor Scheduling.

**UNIT – III**

**Synchronization-**The Critical-Section Problem, Peterson’s Solution, Synchronization Hardware, Semaphores, Classic Problems of Synchronization, Monitors, Synchronization Examples, and Atomic Transactions.

**Deadlocks-** System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention. Deadlock Avoidance, Deadlock Detection, Recovery from deadlock.

## UNIT – IV

**Memory Management Strategies** Swapping, Contiguous Memory Allocation, Paging, Structure of the Page Table, Segmentation.

**Virtual Memory Management** Demand Paging, Page Replacement, Allocation of Frames, Thrashing, Memory-Mapped Files, Allocating Kernel Memory.

## UNIT-V.

**Implementing File System:** File-System Structure, File-System Implementation, Directory Implementation, Allocation Methods, Free-Space Management, Efficiency and Performance, Recovery.

## TEXT BOOK

2. Silberschatz & Galvin, 'Operating System Concepts', 7<sup>th</sup> edition, Wiley.

## REFERENCES

1. William Stallings-“Operating Systems”- 5<sup>th</sup> Edition - PHI
2. Charles Crowley, 'Operating Systems: A Design-Oriented Approach', TMH Publications, 1998 edition.
3. Andrew S.Tanenbaum, 'Modern Operating Systems', 2<sup>nd</sup> edition, 1995, PHI.

**Pre requisite:** Knowledge of system and its resources for running a process.

## Course Educational Objectives:

- ✓ The main objective of the course is to provide basic knowledge of computer operating system structure and functioning.
- ✓ Students able to understand how Operating Systems evolved with advent of computer architecture. Comprehend the different CPU scheduling algorithms, page replacement algorithms and identify best one.
- ✓ Able to understand and find the best mechanism for handling deadlocks. Also understand File and directory management.

## Course Outcomes

- ✓ After successful completion of this course student shall able to,
- ✓ Understand the Operating System (OS) in different viewpoints. Learn the basic reasons for necessity of an OS in our computer and what necessary services it provides to the computer users. Also know the primary concepts of different operating systems structure.

- ✓ Understand the concept of process management, CPU scheduling algorithms and able to identify which CPU scheduling algorithm is efficient.
- ✓ Understand the importance of synchronization and how to handle deadlocks.
- ✓ Know how memory management strategies such as paging and segmentation.
- ✓ Appreciate concepts of virtual memory, demand paging and page replacement algorithms. Comprehend and analyze the importance of different file structures that are used in file storage system.

Learn the basic concepts of directory implementation, free-space management and file recovery.
