(57) Abstract :
Real-time logistics tracking services are included in the invention, which also discloses an Internet of Things-based intelligent logistics system. The system also includes a warehouse management subsystem and an e-commerce platform subsystem, and a logistics management platform. Because of its real-time sensing and monitoring capabilities, the inventive logistics system can be used to efficiently gather logistics data while also planning transportation and managing warehouses. This reduces the need for additional staff and saves time and money. Additionally, an e-commerce platform system makes the logistics process more transparent and open to third parties.
